PROFESSIONAL SUMMARY

Full Stack Developer with experience building scalable web applications using JavaScript, TypeScript, React, Node.js, Express.js, PostgreSQL, and MongoDB. Proficient in designing RESTful APIs, implementing secure authentication and authorization, integrating cloud services, and developing real-time, performance-focused applications. Experienced with modern frontend development, database design, Docker, Git, and software architecture

EDUCATION

Institute of Management Education

June, 2026

Bachelor of Computer Application in Computer Science

PROJECTS

PERSONAL WEBSITE

- Designed and built a responsive personal portfolio from scratch using React.js and a custom Node.js backend with a maintainable, component-based architecture
- Implemented dynamic, data-driven UI features including GitHub integration, coding tracker, rotating bulletin system, Canvas-based graphics and asynchronous API communication
- Developed REST APIs to serve frontend assets, portfolio data, GitHub statistics, contact and hire requests, and reusable backend services with structured routing and modular request handling

DEV TRACKER

- Built a VS Code extension & session processor to track real-time coding activity using editor events, idle detection, and heartbeat-based session logging
- Developed a TypeScript/Node.js backend with REST APIs, SQLite/Prisma data storage, and a React dashboard for visualizing coding sessions and productivity analytics
- Designed a public API and extensible architecture supporting cloud/local synchronization, developer integrations, authentication, and scalable activity analytics

Deterministic Event Engine - JavaScript

- Designed a deterministic event engine using immutable event sourcing, logical timestamps, and ordered event sequencing for reproducible execution
- Developed a witness layer that automatically captures successful executions and exceptions as structured events, decoupling execution from event recording
- Architected a modular engine with isolated time management, event intake, and event presentation, enabling future support for replay, branching, and state reconstruction

Community Website - Active

- Developing a modular community platform with role-based access control, secure authentication, real-time messaging, and support for customizable community structures
- Building scalable RESTful APIs using Node.js, Express.js, PostgreSQL, Redis, and Socket.IO, with media uploads, notifications, search, and follow systems
- Integrating subscription-based monetization, cloud storage, Docker-based deployment, and production-focused security, caching, and performance optimizations

SKILLS

- **Languages:** JavaScript, TypeScript, Java, C, C++, Python
- **Frontend:** React.Js, HTML, CSS, Tailwind CSS, Redux
- **Backend:** Node.js, Express.js, REST APIs, JWT Authentication, OAuth 2.0
- **Databases:** MongoDB, Mongoose, PostgreSQL
- **Database Tools:** MongoDB Atlas, MongoDB Compass, pgAdmin 4, DBeaver
- **Developer Tools:** VS Code, Docker, Github, Gitlab, Postman, SonarQube, Cypress
- **Cloud & Deployment:** Render, Vercel, Cloudinary
- **Other Technologies:** Multer, Razorpay Integration, Linux, npm, Git

CERTIFICATE

MERN Stack Fundamentals Certificate – Great Learning
